Professional Summary

Full Stack Engineer with **3+ years of experience** architecting and scaling cross-platform mobile applications, backend microservices, and high-performance WebGL interfaces. Built **8+ production systems** serving **200,000+ active users** with **99.5% crash-free sessions**. Specialized in offline-first mobile architectures, high-throughput backend APIs (Go/Node.js), and **Agentic AI Orchestration** using the Model Context Protocol (MCP) and Vector databases. Strong background in government-scale platforms requiring strict data security, hardware integrations, and end-to-end execution from the database layer to the React/Flutter UI.

Technical Skills

Frontend & Web	React, TypeScript, Three.js, WebGL, Framer Motion, Tailwind
Mobile Development	Flutter 3.x, Dart 3.x, Android/iOS Native Channels, GetX, flutter_bloc
Backend Integration	Node.js, Go, REST APIs, GraphQL, WebSocket, gRPC
Agentic AI & Data	LangChain, Model Context Protocol (MCP), Pinecone, PostgreSQL, SQLite
Architecture	Microservices, Offline-First Sync, Clean Architecture, Dependency Injection
DevOps & Tools	GitHub Actions, Docker, Firebase, Figma, Linux

Professional Experience

August 2022–Present	Software Engineer, Manprax Software, New Delhi, India - Architected and deployed 8 end-to-end production systems serving 200,000+ active users across government and education sectors, handling both backend orchestration and frontend/mobile delivery. - Built offline-first data pipelines syncing massive SQLite payloads from low-end mobile devices to secure backend servers, ensuring zero data loss during network failures in remote areas. - Cut API payload sizes and improved screen load times by 35% across the stack by implementing intelligent request batching, payload compression, and Dart isolates for heavy JSON parsing. - Engineered an Agentic AI voice-to-JSON routing pipeline, where user speech is processed via OpenAI and mapped dynamically to complex nested application states. - Developed high-performance web and mobile interfaces using strict design systems, incorporating WebGL and custom animations for FANG-tier user experiences. - Set up CI/CD pipelines via GitHub Actions to automate backend deployments and APK/IPA distribution.
---------------------	---

Key Projects

Agentic Architecture & Portfolio V4

Tech Stack	React, WebGL, Three.js, Framer Motion, Model Context Protocol (MCP)
Achievements	- Engineered a FANG-tier interactive portfolio utilizing WebGL and Three.js for immersive 3D rendering, paired with advanced Framer Motion animations for a premium user experience. - Built a dynamic, zero-hardcode Agentic Architecture visualization system utilizing <code>ResizeObserver</code> to mathematically draw real-time SVG data flows between HTML nodes, showcasing edge-to-database traffic. - Integrated Model Context Protocol (MCP) concepts to demonstrate advanced AI orchestration capabilities bridging traditional microservices with autonomous agent workflows.

ShikshaMP - Government Education Platform

- Tech Stack Flutter, Node.js, WebSocket, SQLite, PostgreSQL, flutter_secure_storage
- Achievements
- Built a full-stack **offline-first data collection system** used by 80,000+ government officials to inspect schools in remote areas with zero connectivity.
 - Engineered a robust background synchronization engine that stores hundreds of assessment forms locally and batches uploads via REST when the network returns, reconciling data securely with the PostgreSQL backend.
 - Encrypted all local assessment data at rest to meet strict government compliance standards.

Subodha - AI-Powered Accessible E-Learning

- Tech Stack Flutter, Python, OpenAI API, flutter_tts, speech_to_text
- Achievements
- Architected an **accessible, voice-driven e-learning platform** for visually impaired students across PWD department schools.
 - Built a **voice-to-JSON AI routing pipeline**: user voice input is sent to a backend AI orchestrator, which returns a structured JSON schema that the client executes to deep-link directly to the desired chapter.
 - Maintained 100% WCAG 2.1 AA screen-reader compliance through explicit semantics and custom UI components.

Kitab Vitran - Supply Chain Management

- Tech Stack Flutter, Go, PostgreSQL, Hive, GitHub Actions
- Achievements
- Delivered a full-stack **hardware-integrated QR scanning platform** to verify the chain-of-custody for **2M+ textbooks** across **10,000+ schools**.
 - Optimized client-side camera memory usage for low-end Android devices and scaled the backend to handle massive concurrent scan events during peak distribution hours.

Education

- 2018–2022 **Bachelor of Technology in Computer Science**, *Moradabad Institute of Technology*, Moradabad, India, **CGPA: 8.2/10**
- Relevant Coursework: Software Architecture, Database Management Systems, Distributed Systems, AI
 - Capstone Project: Cross-platform social networking application (**95% evaluation score**)

Professional Impact

- Technical Leadership Led full-stack architecture decisions across government projects impacting **500,000+ citizens**
- Mentorship Guided **3 junior developers** in clean architecture, API design, and reactive UI principles
